

redcentre@fxguide episode #001 show notes

links mentioned in episode

Join Jason Wingrove and Mike Seymour as they look at a summary of what's happening in and around the RED Camera. We'll cover updates - news of third party add ons and test drives of the latest builds and most importantly we will keep you up to date with the latest advances in post production tools, and workflow.

Sometimes it can be hard work monitoring all the traffic on places such as Reduser - we'll try and give you a summary and discuss the implications for directors, DOPs and of course post-production / visual effects.
